Ai Modules

Text (Generator)

section	Generator
short description	renders a string to a GL render
licence level	Anjuna
ports	Text Input [text/multipurpose]
	Font [text/multipurpose] – tbd. seems to be not operational
	Output [gl/render]
	Fill Color [control/colour]
	Stroke Color [control/colour]
	Stroke Width [control/numeric]
parameter	Anchor [dropdown select] – Alignment [Left{Right/Center/Decimal]
	Type [dropdown select] – 2D/3D
	Text [text area] – used as text input if the port Text Input is not connected
skins	./.

This is the module which renders text into a render output. It doesn't do any text opeartions.

For this you might instead wish to have a look in the text module section, e.g. Notepad.

used in example

- Javascript Multiline Text

Manual

> Renders the input string to the GL output
