Ai Modules

Translate

section	GL
short description	repositions a gl render stream
licence level	Anjuna
ports	Input [gl render]
	Output [gl render]
	VectorIn [control/vector]
	XVectorMod/YVectorMod/ZVectorMod [control/numeric]
parameter	X/Y/Z [knob/rotary fader]
	XModAmount/YModAmount/ZModAmount [knob/rotary fader]
	Matrix [dropdown select] – Default/Projection/ModelView
skins	SimpleXY, VectorIn

This operates on GL streams. In order to translate a texture before rendering it there is another module TexTranslate.

used in example

- CSV Score Board
- Javascript Multiline Text

Manual

> Adjusts the position of input GL primitives in 2D or 3D space.
