Midi To Web

This has been developed with Titan v11. Since Titan v12 Titan supports USB-MIDI input (not with Titan One/T1). Thus, this is mostly obsolete and is only available for documentation.

MidiToWeb is a little program which converts MIDI messages - from class-compliant USB-MIDI-devices - to http-requests which allow to control a Titan installation. As this requires the WebAPI running **it does not work with Titan One**. Also it doesn't work with stand-alone Titan consoles since the required MIDI drivers are not installed. However it is a useful addendum for Titan Mobiles, and can be used on a separate computer which is networked to your Titan console.

MidiToWeb has been developed with Titan v11.0 It may - or may not - work with Titan v10, but you may be required to change the requests which are being sent to Titan.

MidiToWeb comes as installer - which sets all the links and shortcuts for you - and as a zip-only package which simply needs to be unpacked and the program started. And since it's released open source under the New BSD licence the sources are also available - maybe a starting point for your next arduino project?
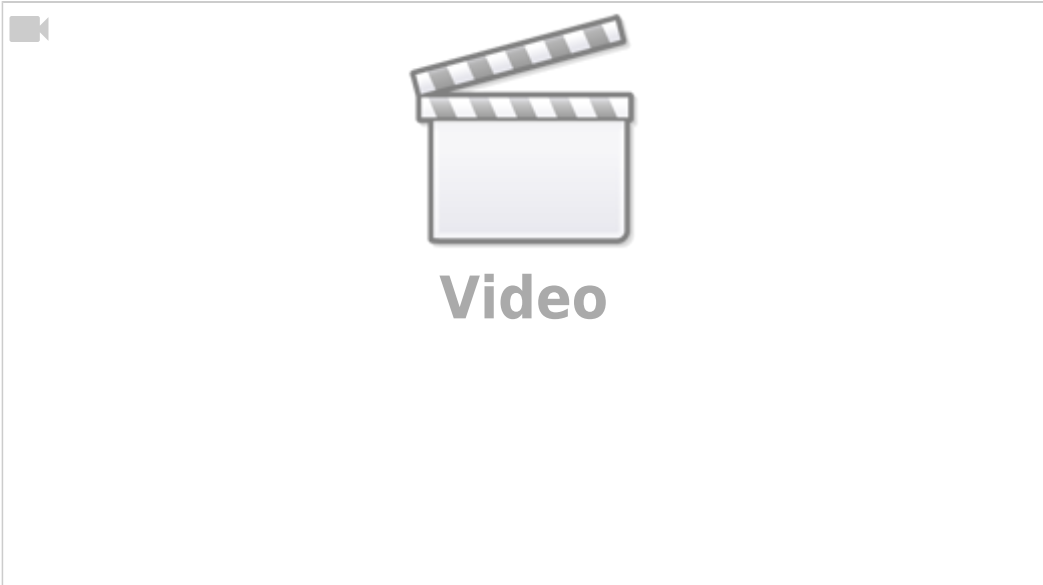

Additionally, in order to find out Titan IDs and locations in your show, there is a little html page available which shows all this (if Titan Mobile or Titan Simulator is currently running on your computer): gettitanids.htm.

MidiToWeb was released in June 2018, the current version is 0.9. However, as Titan IDs has been updated on 11.04.2020 the current version is named 0.9a.

Ressources:

- the installer: MidiToWeb Setup.exe (2.6 MB)
- the manual (already included with the installer): MidiToWeb_Manual_v0.9.pdf (738 kB)
- gettitanids.htm (already included, but you may as well call it from here): gettitanids.htm
- the compact zip package: miditoweb_v0.9a.zip (1.3 MB)
- the sources: miditoweb-sources_v0.9.zip (133 kB)

Any feedback is highly appreciated. Finally, this video gives you an idea of how to use and configure MidiToWeb:
