Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

- ChangePage(x) and ActionScript SetProperty.Integer("Windows.Playbacks.CurrentPage", 0) change to a designated page in many windows
- PreviousPage() and NextPage() usually increment/decrement - but only if a window has a predefined number of pages, e.g. Handles.Playbacks and Handles.MobileAWingPlaybacks but not Handles.StaticPlaybacks

How to use it

1. make this macro available
