Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to Formats and syntax

Each macro changes all hardware handles to a particular page by calling the respective ChangePage() function. Please note that the page number is a 0-based index.

How to use it

1. make this macro available
2. If you copy this macro to a hardware button this will vanish when changing its page. Consider setting its properties to `Handle Paging Locked` in playback options.
