

Example

# Masters - Group Masters

<b>by:</b>	Alex del Bondio
<b>published:</b>	October 2017
<b>description:</b>	Groupmaster control for Groups in the Fixtures and Playbacks workspace

Useful for groups which you don't change that often, which you don't give a real fader and rather use some buttons for just up/down.

[group](#), [master](#), [groupmaster](#), [preset](#), [level](#)

## functions

- [Group.SetGroupFaderLevel](#)

## affected properties

- [Global.PageSwitchAccuracy](#)

There is a file available which has these macros already prepared for groups on preset buttons 1~10:

[adb\\_groupmaster.xml](#)

## Code

[groupmaster.xml](#)

```
<?xml version="1.0" encoding="utf-8"?>
<avolites.macros>

<!--> Examples for handle 1 in the Fixtures and Playbacks workspace <-
->
  <macro id="user.macros.GroupMaster1FF" name="Group Master 1 @FF">
    <sequence>
      <step>Group.SetGroupFaderLevel("Presets", 0, level:1,
Global.PageSwitchAccuracy)</step>
    </sequence>
  </macro>

  <macro id="user.macros.GroupMaster1-50" name="Group Master 1 @50%">
    <sequence>
      <step>Group.SetGroupFaderLevel("Presets", 0, level:0.5,
Global.PageSwitchAccuracy)</step>
    </sequence>
  </macro>
```

```
<macro id="user.macros.GroupMaster1zero" name="Group Master 1 @0">
  <sequence>
    <step>Group.SetGroupFaderLevel("Presets", 0, level:0,
Global.PageSwitchAccuracy)</step>
  </sequence>
</macro>

<macro id="user.macros.GroupMaster1plus" name="Group Master 1 +10%">
  <sequence>
    <step>Group.SetGroupFaderLevel("Presets", 0, levelDelta:0.1,
Global.PageSwitchAccuracy)</step>
  </sequence>
</macro>

<macro id="user.macros.GroupMaster1minus" name="Group Master 1 -10%">
  <sequence>
    <step>Group.SetGroupFaderLevel("Presets", 0, levelDelta:-0.1,
Global.PageSwitchAccuracy)</step>
  </sequence>
</macro>

</avolites.macros>
```

## Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

`Group.SetGroupFaderLevel` does exactly that: sets a group master to a designated - absolute or relative - level. For more details see [Group.SetGroupFaderLevel](#).

## How to use it

1. [make this macro available](#)
2. create some groups, and copy them to buttons 1~10 in the Fixtures and Playbacks window (this is another window than the Fixtures window! You get it via [Open Workspace Window] [Fixtures and Playbacks]).
3. now, with the macros mapped to buttons, you can control the 'virtual group faders'
