description:	set release priority
remarks:	

adb_release_priority.xml

[release, priority](#)

This selection of macros lets you change the release priority. These macros have [Active Binding](#) set so they will highlight and give visual feedback.

The code below is a snippet of the whole file which contains macros for all available release priorities.

affected properties

- [Playbacks.ReleasePriority](#)

Code

[releasepriority.xml](#)

```
<?xml version="1.0" encoding="utf-8"?>
<avolites.macros>

  <macro id="adb.Macros.Release.High" name="adb Release Priority High">
    <active binding="{propertyLink id='Playbacks.ReleasePriority'
      converter='Math.EnumAsStringEqualityConverter'
      converterParameter='HighPriority'}"/>
    <sequence>
      <step>ActionScript.SetProperty.Enum("Playbacks.ReleasePriority",
"HighPriority")</step>
    </sequence>
  </macro>

</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to

Formats and syntax

- `Playbacks.ReleasePriority` is the property that defines the release priority and needs to be set via `ActionScript.SetProperty.Enum`
- `active binding` is used to highlight a macro when the corresponding property (`propertyLink id`) matches the `converterParameter`. A good starting point to understand active binding is either this wiki or this post in the Avo forum <http://forum.avolites.com/viewtopic.php?f=20&t=5962>

How to use it

- [make this macro available](#)
