converterParameter='Pull End'}/>  
<sequence>  
  <step>Programmer.Editor.Fixtures.Fan.SelectCurve("Pull  
End")</step>  
</sequence>  
</macro>  
</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

The macros simply set the fan curve to a specific value. Each macro can be put on a button. Using [Active Binding](#) the button is highlighted if the curve is currently selected.

How to use it

- [make this macro available](#)
- copy the macros on available buttons to quickly change the fan curve.
