| description: | change a particular playback's fade mode |
| remarks: | This is not a working macro. However, the discussion gives some good examples and insights. |

[, [handle](#), [playback](#), [fademode](#),]

functions

- [ActionScript.SetProperty](#)
- [ActionScript.SetProperty.Enum](#)

affected properties

- [Handles.SourceHandle](#)
- [Playbacks.Editor.SelectedPlayback](#)
- [Playbacks.Editor.Times.CueMode](#)

Original Discussion

Post by Gregory » 29 Apr 2017, 21:24

The first and third steps do not look right or are unnecessary: `Handles.SourceHandle` is the item selected in operations such as `Delete` and `Set Legend`, you are setting this in the first step. `Playbacks.Editor.SelectedPlayback` is playback in use by the `Edit Times` menu, you are setting this in the third step even though it won't have changed.

Code

```
<sequence>
  <step pause="0">ActionScript.SetProperty("Handles.SourceHandle",
Playbacks.Editor.SelectedPlayback)</step>
  <step
pause="0">ActionScript.SetProperty.Enum("Playbacks.Editor.Times.CueMode",
"Model")</step>
  <step
pause="0">ActionScript.SetProperty("Playbacks.Editor.SelectedPlayback",
Handles.SourceHandle)</step>
```

</sequence>

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

It is believed that the 1st and third step are unnecessary, see Gregory's post above. It looks like these steps are copied from examples like [Chase - Double speed](#) where it is required to store and restore the selected playback - which is not the case here.

`ActionScript.SetProperty.Enum("Playbacks.Editor.Times.CueMode", "Mode1")`
simply sets the fader mode of the playback which is currently in the editor to Mode1.

How to use it

Put this snippet into a proper macro file and [make this macro available](#).

With a cue programmed, now you can , instead of going to Edit Times, or Playback View/Options, or Playback Options/Playback, simply fire this macro to set the cue to Fader Mode 1 == Timed Fade In & Out.

Tested in 10.1 - seems to work as intended [S. Beutel]
