Note that this only sets the priority but doesn't actually release. A macro which does both is this:
[Release - Set Priority and Release](#)

[release, priority](#)

functions

- [ActionScript SetProperty.Enum](#)

affected properties

- [Playbacks.ReleasePriority](#)

Note that the syntax is slightly different from the API documentation. This macro has been successfully tested in Titan 10.1.

Code

[setreleasepriority.xml](#)

```
<?xml version="1.0" encoding="utf-8"?>
<avolites.macros xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="Avolites.Menus.xsd">

    <macro id="Avolites.Macros.Release.Low" name="Release Priority Low">
        <sequence>
            <step
pause="0.01">ActionScript SetProperty.Enum("Playbacks.ReleasePriority",
"LowPriority")</step>
        </sequence>
    </macro>

    <macro id="Avolites.Macros.Release.Medium" name="Release Priority
Medium">
        <sequence>
            <step
pause="0.01">ActionScript SetProperty.Enum("Playbacks.ReleasePriority",
"Medium")</step>
        </sequence>
    </macro>
```

```
"MediumPriority")</step>
    </sequence>
</macro>

    <macro id="Avolites.Macros.Release.High" name="Release Priority High">
        <sequence>
            <step
pause="0.01">ActionScript SetProperty.Enum("Playbacks.ReleasePriority",
"HighPriority")</step>
        </sequence>
    </macro>

    <macro id="Avolites.Macros.Release.Programmer" name="Release Priority Programmer">
        <sequence>
            <step
pause="0.01">ActionScript SetProperty.Enum("Playbacks.ReleasePriority",
"ProgrammerPriority")</step>
        </sequence>
    </macro>

    <macro id="Avolites.Macros.Release.Max" name="Release Priority Very High">
        <sequence>
            <step
pause="0.01">ActionScript SetProperty.Enum("Playbacks.ReleasePriority",
"MaximumPriority")</step>
        </sequence>
    </macro>
</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

These macros set the release setting/user setting Release Priority which can either be set by clicking <Release> and toggling [Release Priority], or by setting the user setting.

How to use it

- [make this macro available](#)
- fire one of the macros to set the release priority as intended
