

Function

Group.QuickCreateGroup

```
Void Group.QuickCreateGroup(Handle handle, AcwUserNumber userNumber, String legend, Int32 iconId)
```

API	https://api.avolites.com/15.0/api/Group.QuickCreateGroup.html
description	Quick Create Group function. Takes a legend or guesses one and records the current fixture selection as a new group on the supplied handle.
namespace	Group
parameter	handle (Handle) : The handle to record to. Note that at time of use this handle doesn't exist. You need to use a handle reference, see Handles.CreateHandleReference
	userNumber (AcwUserNumber , see also userNumber) : The suggested user number.
	legend (String) : The legend. If null or empty the name of the context fixture will be used.
	iconId (Int32) : The id of an icon to apply to this group.
return value	Void

Example in

Quick-Create groups:

```
<step>Group.QuickCreateGroup(Handles.CreateHandleReference("Groups", 1, 10), userNumber:10, "Group 10", 0)</step>
```

Also used in

- [Quick-Create groups](#)
- [Handles.CreateHandleReference](#)
