Function

Handles.GetHandle

```
Handle Handles.GetHandle(String group, Int32 page, Int32 index)
```

API	http://api.avolites.com/11.0/Handles.GetHandle.html
description	Get the Handle currently occupying a slot
namespace	Handles
parameter	group(String) : Group name
	page (Int32) : Page on that group
	index (Int32) : Index on that page
return value	Handle

Example in

setcuelistcuelegend:

```
  Handles.GetHandle("PlaybackWindow",0,76)
```

Essentially this works similar to “`Location=PlaybackWindow,0,76`” where a handle is required, see Gregory's reply at http://forum.avolites.com/viewtopic.php?f=20&t=5662#p20445

Also used in

- Delete Playback
- Legend - Get a cuelist cue's legend
