Function

Handles.SetLockState

This is based on the API function but does actually not work!

```
Void Handles.SetLockState(LockStates state)
```

API	http://api.avolites.com/11.0/Handles.SetLockState.html
description	Set the lock state of a handle
namespace	Handles
parameter	state (LockStates) : “Unlocked”, “TransparentLocked” or “FullyLocked”
return value	Void
affects	Handles.SourceHandle

Example in

Playback - Set lock state

```
  <step>Handles.SetSourceHandle("Playbacks", 0)</step>
  <step>Handles.SetLockState(TransparentLocked)</step>
```

Puts a transparent lock on handle #1 of the current playbacks page.

Also used in

- Playback - Set lock state
- Function list
