

Function

Math.EqualityConverter

Boolean Math.EqualityConverter(string StringToCheckAgainst)

API	currently not in the API
description	ASSUMPTION this checks if a parameter equals to a given string and returns true if it does
namespace	Math
parameter	StringToCheckAgainst (String) : string to compare the parameter with Parameter (String) : the property tp check whether it matches the string. This needs to be set separately, see example
return value	

```
<active binding="{propertyLink
id='Programmer.Editor.Fixtures.Fan.SelectedFanCurveId'
converter='Math.EqualityConverter'
converterParameter='Line'}"/>
```

Here, the property Programmer.Editor.Fixtures.Fan.SelectedFanCurveId is tested if it matches the string Line, and if yes, the key the macro is saved on is highlighted active.

Also used in

- [Fan - Curve](#)
