

Function

Math.EqualityConverter

Boolean `Math.EqualityConverter(string StringToCheckAgainst)`

API	currently not in the API
description	ASSUMPTION this checks if a parameter equals to a given string and returns true if it does
namespace	Math
parameter	StringToCheckAgainst (String) : string to compare the parameter with Parameter (String) : the property to check whether it matches the string. This needs to be set separately, see example
return value	Boolean

Hint: there is another `Math.EqualityConverter` explained at <https://github.com/RicoSuter/MyToolkit/blob/master/src/MyToolkit.Extended/Converters/EqualityConverter.cs>:

Returns a bool whether the objects string representation equals to the converter parameter.

Example in

[Fan - Curve](#)

```
<active binding="{propertyLink  
id='Programmer.Editor.Fixtures.Fan.SelectedFanCurveId'  
converter='Math.EqualityConverter'  
converterParameter='Line'}"/>
```

Here, the property `Programmer.Editor.Fixtures.Fan.SelectedFanCurveId` is tested if it matches the string `Line`, and if yes, the key the macro is saved on is highlighted active.

Also used in

- [Fan - Curve](#)
