

Function

Math.ToEnum

```
Enum Math.ToEnum(String assemblyName, String typeName, String value)
```

API	http://api.avolites.com/11.0/Math.ToEnum.html
description	Converts a string to an enum.
namespace	Math
parameter	assemblyName (String) : Name of the assembly. typeName (String) : Fully qualified name of the type. value (String) : The string which an enum is searched for.
return value	Enum

An assembly is kind of a building block of the Titan program - see <https://docs.microsoft.com/en-us/dotnet/framework/app-domains/assemblies-in-the-common-language-runtime>

Example in

[Trigger - Add MIDI trigger](#):

```
Math.ToEnum("", "Avolites.Menus.MenuEventTypes", "OnSelect")
```

This returns the enum value which corresponds with the name 'OnSelect', of the [MenuEventTypes](#)

Also used in

- [Trigger - Add MIDI trigger](#)
- [Playback - Set lock state](#)
- [Triggers.SetPendingTargetHardware](#)
