Function

Menu.ErrorReport

```
Void Menu.ErrorReport(String menuId, String message)
```

API	http://api.avolites.com/11.0/Menu.ErrorReport.html
description	Handler for the base Menu Exception. Just displays a message on screen and waits for confirmation.
namespace	Menu
parameter	menuId (String) : The ID of a menu to display the error to the user in. While there are many menus in Titan, the most common menuId for this purpose is `'Error.Generic'` which is the general purpose message prompt.
	message (String) : Message to display in the prompt.
return value	Void

This inherently sets Menu.ErrorMessage = message so that it can be displayed again with `Menu.PushOrReloadMenu("Error.Generic")`

Example in

Show a message prompt:

```
<step>Menu.ErrorReport('Error.Generic', "Welcome to the world of macros!")</step>
```

Also used in

- Show a message prompt
