

Function

# Menu.ErrorReport

Void Menu.ErrorReport(String menuId, String message)

<b>API</b>	<a href="http://api.avolites.com/11.0/Menu.ErrorReport.html">http://api.avolites.com/11.0/Menu.ErrorReport.html</a>
<b>description</b>	Handler for the base Menu Exception. Just displays a message on screen and waits for confirmation.
<b>namespace</b>	Menu
<b>parameter</b>	menuId ( <a href="#">String</a> ) : The ID of a menu to display the error to the user in. While there are many menus in Titan, the most common menuId for this purpose is 'Error.Generic' which is the general purpose message prompt.
	message ( <a href="#">String</a> ) : Message to display in the prompt.
<b>return value</b>	<a href="#">Void</a>

This inherently sets [Menu.ErrorMessage](#) = message so that it can be displayed again with [Menu.PushOrReloadMenu](#)("Error.Generic")

### Example in

Show a message prompt:

```
<step>Menu.ErrorReport('Error.Generic', "Welcome to the world of macros!")</step>
```

### Also used in

- [Show a message prompt](#)
