Function

PlaybackGroups.CreatePlaybackGroupWithPlaybacks

```
Void PlaybackGroups.CreatePlaybackGroupWithPlaybacks(String
playbackGroupName, IEnumerable<PlaybackHandle> playbackHandles)
```

API	https://api.avolites.com/15.0/api/PlaybackGroups.CreatePlaybackGroupWithPlaybacks.html
description	Creates a new playback group with the specified playbacks as members.
namespace	PlaybackGroups
parameter	playbackGroupName (String) : The name of the new playback group.
	playbackHandles (IEnumerable) : The playback handles to have in the group.
return value	Void

See Playback Groups - Create and Add for various ways to pass the IEnumerable of playback handles. As this function is in the namespace PlaybackGroups it assumes any passed handle to be in this namespace too. You need to use Playbacks.FilterByPlaybackHandle to make sure the playbacks are looked up in the correct namespace.

Example in

Playback Groups - Create and Add:

```
<step>PlaybackGroups.CreatePlaybackGroupWithPlaybacks("Test",
Playbacks.FilterByPlaybackHandle(Handles.ContextHandles))</step>
```

Also used in

- Playback Groups - Create and Add
