Function

Playbacks.FilterByPlaybackHandle

```
IEnumerable`1 Playbacks.FilterByPlaybackHandle(IEnumerable<Handle> handles)
```

API	https://api.avolites.com/15.0/api/Playbacks.FilterByPlaybackHandle.html
description	Returns the same list but with only handles that derive from a playback handle.
namespace	Playbacks
parameter	handles (IEnumerable) : The list of handles.
return value	IEnumerable

Example in

Playback Groups - Create and Add:

```
<step>PlaybackGroups.CreatePlaybackGroupWithPlaybacks("Test",
Playbacks.FilterByPlaybackHandle(Handles.ContextHandles))</step>
```

Here the outer function `CreatePlaybackGroupWithPlaybacks()` lives in the namespace PlaybackGroups but requires the second parameter to be a list of Playback handles. `Playbacks.FilterByPlaybackHandle()` makes sure the passed list is looked up correctly.

Also used in

- Playback Groups - Create and Add
- PlaybackGroups.AddPlaybacksToGroup
- PlaybackGroups.CreatePlaybackGroupWithPlaybacks
