

Function

Playbacks.SetPlaybackLevel

Single `Playbacks.SetPlaybackLevel(Handle srcHandle, LevelAdjust level)`

| | |
|---------------------|---|
| API | https://api.avolites.com/12.0/Playbacks.SetPlaybackLevel.html |
| description | Sets the level of a playback. |
| namespace | <code>Playbacks</code> |
| parameter | <code>srcHandle (Handle)</code> : The playback handle. <code>level (Leveladjust)</code> : The level. |
| return value | <code>Single</code> tba - the API states that this returns a single but I have no idea what this value might be useful for. |

Example in

[Cuelist - Set Me At Full](#):

```
<step>Playbacks.SetPlaybackLevel(this, level:1)</step>
```

In this cuelist macro this refers to the cuelist which is set to full with `level:1`.

Also used in

- [Cuelist - Set Me At Full](#)
