

Function

Playbacks.SetPlaybackLevel

Single `Playbacks.SetPlaybackLevel(Handle srcHandle, LevelAdjust level)`

API	https://api.avolites.com/12.0/Playbacks.SetPlaybackLevel.html
description	Sets the level of a playback.
namespace	<code>Playbacks</code>
parameter	<code>srcHandle (Handle)</code> : The playback handle. <code>level (Leveladjust)</code> : The level.
return value	<code>Single</code> tba - the API states that this returns a single but I have no idea what this value might be useful for.

Example in

[Cuelist - Set Me At Full](#):

```
<step>Playbacks.SetPlaybackLevel(this, level:1)</step>
```

In this cuelist macro this refers to the cuelist which is set to full with `level:1`.

Also used in

- [Cuelist - Set Me At Full](#)
