Function

Playbacks.StoreCue

```
Void Playbacks.StoreCue(String group, Int32 index, Boolean updateOnly)
```

API	http://api.avolites.com/11.0/Playbacks.StoreCue.html
description	Records a single cue on a playback. The new cue is created using the information in the programmer and the current record mode.
namespace	Playbacks
parameter	group (String) : The handle group the new cue is to be recorded on. See Location
	index (Int32) : The handle ID in the group the cue is to be recorded on.
	updateOnly (Boolean) : if set to true [update only].
return value	Void

Example in

Playback - Record and set userNumber:

```
<step>Playbacks.StoreCue("PlaybackWindow", 1000, false)</step>
```

Also used in

- Create Dummy Palettes
- Store cues with current page names as legends
- Programmer - Park/Restore/Swop
- Playback - Record and set userNumber
- Playback - Record to fixed location
