

Function

# Programmer.RefireProgrammer

```
Void Programmer.RefireProgrammer(AcwProgrammerIdPair programmer)
```

<b>API</b>	<a href="https://api.avolites.com/11.0/Programmer.RefireProgrammer.html">https://api.avolites.com/11.0/Programmer.RefireProgrammer.html</a>
<b>description</b>	Re-fires the programmer. Similar to 'Restart Shapes'.
<b>namespace</b>	Programmer
<b>parameter</b>	programmer ( <a href="#">AcwProgrammerIdPair</a> ) : the programmer
<b>return value</b>	Void

## Example in

[Shapes - Reverse, Offset, Restart](#):

```
<step  
pause="0.001">Programmer.RefireProgrammer(Programmer.CurrentProgrammerIds)</  
step>
```

This is a replacement for the manual 'Restart Shapes' in the shape generator. The programmer is directly referenced with `Programmer.CurrentProgrammerIds`.

## Also used in

- [Shapes - Reverse, Offset, Restart](#)
- [AcwProgrammerIdPair](#)
