

Function

Timecode.Context.Pause

```
Void Timecode.Context.Pause()
```

API	http://api.avolites.com/11.0/Timecode.Context.Pause.html
description	Pauses the timecode timer in Titan.
namespace	Timecode.Context
parameter	none
return value	Void

Titan v11 introduced four separate timecode sources. Subsequently, there are now functions like `Timecode.TimecodeOne.Pause`, `Timecode.TimecodeTwo.Pause` etc. `Timecode.Context.Pause` has the same effect like `Timecode.TimecodeOne.Pause` and is believed to also work in pre v11 versions which had only one global Timecode source.

Example in

[Timecode - Start/Stop](#):

```
<step>Timecode.Context.Pause()</step>
```

Also used in

- [Timecode - Start/Stop](#)
