

Function

Windows.SetWindowProperty.Y

```
Void Windows.SetWindowProperty.Y(String windowId, Single y-position)
```

API	./.
description	sets a specific window's y position
namespace	Windows.SetWindowProperty
parameter	windowId (String) : the Id of the window, see Windows x-position (Single) : value from 0 to 2. The whole workspace is 2 units high and divided into 8 parts.
return value	Void

X, Y, Width and Height are the window's attributes and thus cannot be set with `ActionScript.SetProperty`. Instead, the dedicated functions in the namespace [Windows.SetWindowProperty](#) must be used.

Example in

Create Workspaces:

```
<step>Windows.SetWindowProperty.Y("Windows.Playbacks", 0)</step>
```

Also used in

- [Attribute Wheels And Palette Windows](#)
- [Create Workspaces](#)
- [Function list](#)
