

Titan Identifier

# trackHandleId

This is the Id which identifies a particular setlist track. Used e.g. in [Setlist - Fire a specific track](#). Please see the explanation there:

Albeit there are various functions to fire and edit setlist tracks, the main challenge is to identify the particular track. After a number of pointless tries Gregory confirmed that currently usernumbers for setlist tracks are not implemented. Hence the only way to identify a track is its id. And as it is also not possible to make a track show its id and it's also not shown via Web API the only way to get the id is to retrieve it from the showfile. And finally, as `SetList.FireTrack` comes from the namespace `SetList` passed TitanIDs are parsed in the `SetList` context which fails. The only way to make it work is the string notation `SetList.FireTrack("trackHandleID=1840")`.

In order to make it easier to get a setlist track id [the showfile parser](#) has been extended to show them, e.g. [in this example](#) (click Show Setlists).

The trackHandleId is an [Int32](#) and is set by Titan.
