

Identifiers

This is a very special section: 'identifiers' tries to list and explain all the values you need to identify a certain item or state. As such, 'identifiers' are not part of pure programming logic or documentation. In fact in most parts this is just convention and system design: how to identify a certain button/playback/palette, how to tell which state a certain item to set to, etc.

Identifiers may be of various data types: there may be very complex ones, e.g. [Handle](#), and there are others which are simply a string or even a number which you only need to know and set as argument for a specific function or variable.

Identifiers listed here:

- [ControlName](#)
 - [FixtureControlId](#)
 - [Handle](#)
 - [Location](#)
 - [MenuEventTypes](#)
 - [PanelMidiCommands](#)
 - [profileId](#)
 - [titanId](#)
 - [trackHandleId](#)
 - [userNumber](#)
 - [Windows](#)
-
