

Namespace

# Windows.SetWindowProperty

*Namespaces are not listed nor explained in the online API documentation. Hence, the description is merely guessed.*

This namespace holds undocumented functions to alter specific window's attributes. As these are direct attributes and not elements, the standard functions like [ActionScript.SetProperty](#) cannot be used. Instead use the functions in this namespace. See also [Windows](#).

Items in this namespace:

## Properties

**Plugin Backlinks: Nothing was found.**

## Functions

- [Windows.SetWindowProperty.Height](#)
- [Windows.SetWindowProperty.Width](#)
- [Windows.SetWindowProperty.X](#)
- [Windows.SetWindowProperty.Y](#)
