Titan Property

Triggers.SelectedMappingId

API	http://api.avolites.com/11.0/Triggers.SelectedMappingId.html
description	Gets or sets the selected mapping id.
Namespaces	Triggers
type	Int32 *ASSUMPTION (in the example the id is blindly passed on).*

example

```
<step>Triggers.SelectMappingByName("Your Mapping Name")</step>
...
<step>Triggers.AddMidiTrigger(Triggers.SelectedMappingId, ...)
```

In order to create a MIDI trigger a mapping needs to be selected. Usually a mapping is selected by its name - but the AddMidiTrigger() function requires a mapping passed by its id.

At first a specific mapping is selected by its name. Then its id is retrieved by passing `Triggers.SelectedMappingId`.

used in

- Trigger - Add MIDi trigger
- Triggers.SelectMappingByName
