# Creating vis files from d4 personalities

(This is NOT an official documentation but simply based on my personal experiences - it might be not complete or even simply wrong in some aspects. Please give feeback if you find anything what you think should be improved.)

Even though the old visualiser is now superseded by Capture it might be useful for some - and as personalities for the visualiser are not made any more, here are some hints how you can make them from d4 Titan personalities.

A pre-requisite is of course an up-to-date manual or at least DMX chart of the fixture you want to do files for.

### 1. Check if there really doesn't exist one

Use the search on https://personalities.avolites.com/ to check if there really doesn't exist what you need - downloading is always faster than attempting to do yourself.

### 2. Update your personality library

You certainly do not want to work with old data. Thus, download and install the latest Titan Fixture Library from https://personalities.avolites.com/.

### 3. Prepare a skeleton folder structure

This process will produce a couple of files which all need to go to designated folders. It has proven to be useful to have such a folder structure while preparing vis personalities:

```
My Fixture

// You may put the manual/DMX-Chart here //

Avolites

Titan

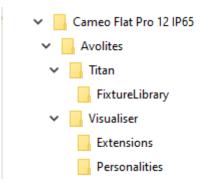

FixtureLibrary

Visualiser

Personalities

Extensions
```

Example:

### 4. Identify the correct d4 file

We assume that a d4 personality for your fixture already exists. Luckily they usually have verbose file names - have a look in the personality folder (with the PC suite installed it is C:\Program Files (x86)\Avolites\Titan\FixtureLibrary). If you don't find what you need then search at https://personalities.avolites.com/ or https://www.avolites.de/downloads/d4find for the correct filename. If you still don't find anything then request the personality for Titan or build it yourself (this might be explained on another day).

If you have found the correct d4 file copy it to \Avolites\Titan\FixtureLibrary in the folder structure.

Now, our example looks like this:

```
CAMEO FLAT PRO 12 IP65

CLPFLATPRO12IP65_Cameo_Bedienungsanleitung_EN_DE_FR_ES.pdf

CLPFLATPRO12IP65_Cameo_DMX_Control_table.pdf

Avolites

Titan

FixtureLibrary

Cameo_FLAT PRO 12 IP65 (CLPFLATPRO12IP65).d4

Visualiser

Extensions

Personalities
```

Then doubleclick the d4 file to open it in the Titan Personality Builder.

### 5. Create/check Pearl references

In the personality builder expand the modes section (left panel). One by one click on each mode and check that there is a setting in the Classic Pearl Reference field bottom right. This makes the reference from Titan to the visualiser.

	Name How this mode will be a		and the second second				
		and the second second second	contra press reference.				

If there is no entry then you need to make one yourself:

- albeit max. 11 characters yre allowed you make your life easier if you use max. 8 characters
- no spaces, no special characters, no umlauts, no symbols just characters and numbers
- a good habit:
  - $\circ\,$  start with two characters denoting the manufacturer (i.e. "RO" for Robe, "UK" for Unknown etc.)
  - four to five characters for the fixture name
  - one or two characters for the mode
  - each reference must be distinct

Here it is already set as UKCMF125 which could be derived from

- UK as Unknown (this was where Cameo was listed previously)
- CM from Cameo
- F12 is a very brief abbreviation for Flat Pro12
- 5 denotes mode 5

If you need (or want) to make your own entries then please check if a similar file (with an .R20 extension) already exists in C:\Program Files

(x86)\Avolites\Visualiser\Personalities. If it does then use another reference. Again, each reference needs to be unique.

If you have changed anything then don't forget to save it with Save from the Files menu.

### 6. Generate R20 (and Vis) files

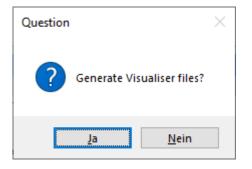

Now let's Personality Builder do its magic to prepare the files - it will most likely need our help for this

### From the File menu select Generate R20 Files...

ile	Edit View Tools Help	
	New	Strg+N
	Open	Strg+O
	Close	
	Save	Strg+S
	Save As	Strg+A
	Save to Fixture Library	Strg+F
	Generate R20 Files	
	Export	>
	Import	>
	Cameo_FLAT PRO 12 IP65 (CLPFLATPRO12IP65).d4	

The next prompt asks if you want to create Visualiser files as well. Confirm this with Yes.

Now, one by one, Personality Builder scans each mode. For each mode, two files are created: an .R20 file (like he classic pearl files) and a vis file which is the actual visualiser personality. However, things usually don't go that smoothly.

The next prompt asks where the file should be saved - usually we can just confirm this (the filenam is created from our **unique** reference...):

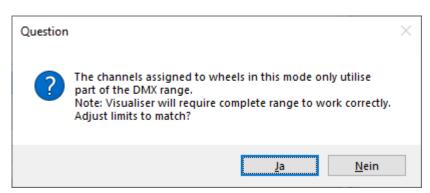

5/8

Creating vis files from d4 personalities

.== ▼

Next, depending from the d4 file some prompts may be shown, e.g.

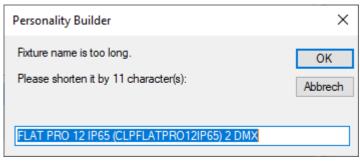

The channels assigned to wheels in this mode only utilise part of the DMX range. Note: Visualiser will require complete range to work correctly. Adjust limits to match?

Usually I select **No** here as we will check and correct the vis file manually anyway.

Another such prompt:

Fixture	e name is	s too	long	].
Please	shorten	it b	v 11	character(s):
			•	

Here, you need to comply - shorten the given fixture name as only 11 characters can be displayed in the visualiser. This needs to be done per mode - it's a good idea to use something like 'm1', 'm2' or such to distinguish the modes. Here, I set the given name to FLAT PRO 12 m1.

Now the next mode is parsed and checked. Again we get the prompt asking for the filename. **This time it really needs to be checked and corrected** as it again suggest the name derived from mode 1. Change the filename for the one which refers to the reference of mode 2 (as suggested in the prompt's title bar):

🐱 Save "3 DMX m1	(UKC	CMF122)						×
$\leftarrow \rightarrow \checkmark \uparrow$	>	Dieser PC → Desktop →			~ ∂	"Desktop" durchsu	ichen	Q
Organisieren 🔻	Net	uer Ordner						?
💻 Dieser PC	1	^ Name	^	Änderungsdatum	Тур	Größe		^
3D-Objekte		Acad		03.09.2019 08:54	Dateiordner			
Bilder		📙 Benj		03.01.2020 13:28	Dateiordner

👆 Downloads		MID		18.12.2019 20:00	Dateiordner			
🁌 Musik		Möh		17.11.2019 12:30	Dateiordner			
Videos		🗸 🛛 🛃 projects		26.09.2019 12:04	Dateiordner			~
		Harry Caluation Deutell D						
Datei <u>n</u> ame:	C:\	Users\Sebastian Beutel\D	Jesktop UKCIVIF121.R20					~
Datei <u>t</u> yp:	Azu	ure/Pearl/Sapphire Persor	nality (*.R20)					$\sim$
<ul> <li>Ordner ausblende</li> </ul>	n					<u>S</u> peichern	Abbreck	nen

Here it again suggests the filename UKCMF121.R20 - however, the title bar tells that we have to change this to UKCMF122.R20.

Proceed with this until all modes have been processed. Eventually, 2 files per mode will be created. Here, as all five modes have references and are exported, 10 files will be created:

Move all .R20 files to the folder Avolites\Visualiser\Personalities and all .VIS files to the folder Avolites\Visualiser\Extensions of your folder skeleton. In our example the result looks like this:

CAMEO FLAT PRO 12 IP65 CLPFLATPRO12IP65\_Cameo\_Bedienungsanleitung\_EN\_DE\_FR\_ES.pdf CLPFLATPRO12IP65\_Cameo\_DMX\_Control\_table.pdf

available.

Usually the R20 files - originally personalities for the Classic consoles - do not need to be edited. I had

Editing R20 files is done with a standard text editor. Make sure the editor really works with plain ASCII text without interfering with the character set, encoding or whatsoever. For starters, Windows Editor (a.k.a. Notepad) does work. Personally I prefer Notepad++ - but there are many such programs

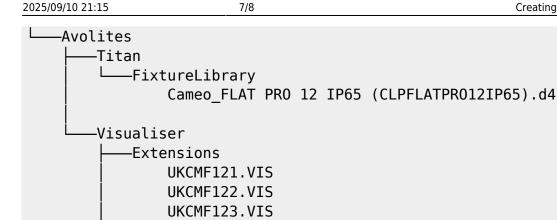

a coupld of times where I needed to do this in the past in order to make the visualiser working

properly. If I come across such a fixture again I will add this to this section.

Most of the syntax is explained in the file itself. Only as a reference, here is a screenshot of such a file opened in Notepad++.

## www.usc. The device name, upto 11 characters, no spaces are allowed mode=2 DMR 2 DMR Channels SVICE UNCMF121 NE "Cameo" "FLAT FRO 12 m1" The Type of instrument, 1 & M must required for beckward compatibility The middle number denotes the number of DMX channels used Nirror/Head resolution maximum tilt movement (in degrees) maximum pan movement (in degrees) 1 means moving mirror, 2 means moving head Patching Information.
