Cameo_Pixbar650CPro

This is another example for creating a vis file (old visualiser personality) from a d4 file (Titan personality). The fundamentals are described in Creating vis files from d4 personalities. Here, only the little details are explained.

- this fixture has subfixtures (cells) a feature neither the classic consoles nor the visualiser support
- instead, we build a vis personality which at least shows cell #1 so that we have an impression if the fixture should work
- colour temperature control is not supported
- patterns and sound are not implemented in the visualiser (they are in no visualiser I know of)

Apart from that it works reasonably well in the visualiser.

The DMX table:

(full DMX tables are in the manual which is included in the zip below)

CH Mode CLP	IXBAR450CP	RO / CLPIXBA	\R6500	PR0	
CH1	Dimmer	000	-	255	Master Dimmer 0-100%
	$\neg \neg \neg$	000	-	005	Strobe open
	Ī	006	-	010	Strobe closed
	Ī	011	-	033	Puls Random, slow -> fast
	Strobe	034	-	056	Ramp up Random, slow -> fast
CH2		057	-	079	Ramp down Random, slow -> fast
	Ī	080	-	102	Random Strobe Effect, slow -> fast
	Ī	103	-	127	Strobe Break Effect, 5s1s (Very Short Flash)
	Ī	128	-	250	Strobe slow -> fast 0Hz - 20Hz
		251	-	255	Strobe open
CH3	Red	000	-	255	0% to 100%
CH4	Green	000	-	255	0% to 100%
CH5	Blue	000	-	255	0% to 100%
		000	-	005	Colour off
	Ī	006	-	013	Red
	Ī	014	-	021	Amber
	Ī	022	-	029	Yellow warm
	Ī	030	-	037	Yellow
	l I	038	-	045	Green
	Ī	046	-	053	Turquoise
	Ī	054	-	061	Cyan
Cr	Colour Macro (override	062	-	069	Blue
		070	-	077	Lavender
	RGB)	078	-	085	Mauve
	Ī	086	-	093	Magenta
	Ī	094	-	101	Pink
	Ī	102	-	109	Warm White
	Ī	110	-	117	White
	Ī	118	-	125	Cold White
	Ī	126	-	128	Colour Jumping Stop
		129		192	Colour Jumping Speed slow -> fast/ Colour 1 -> 12
		193	-	255	Colour Fading Speed slow -> fast / Colour 1 -> 12
ouz C	olour Tem-	000	-	005	off
CH7	perature	006	-	255	cold to warm
		000	-	005	Pattern off
	1	006	-	023	Dream

Most importantly, when setting the Classic Pearl References in the Personality Builder, we also need

to add the attributes to the respective Compatibility Attributes sections of the multicell modes as this is where R20 and VIS files are created from:

- check Classic Pearl References as described
- add references for the 26ch and the 30ch modes (I used UKCM65C5 and UKCM65C6)
- unfold both modes (left panel)
- click on Compatibility Attributes (left)

• top-right, in the Created Attributes tab, doubleclick on the attributes you want in that mode (26ch: Dimmer, Shutter, Red, Green, Blue; 30ch: Dimmer, Shutter, Red, Green, Blue, Colour Macro, CTO, Auto, Sound) - the attributes are assigned channels in the order you add them, thus adding in the correct order makes life easier

The coubleclick

adds each attribute to the selected mode (here: compatibility attributes). Alternatively you can drag and drop the attributes there.

 now we need to check/correct the channels for each Compatibility Attributes section. Click on Compatibility Attributes (left), then on the tab Channel (bottom right). Check (and correct) the channel offsets as required,
