# Converting Patterns in Excel

- copy pattern functions into new text file
- replace `<Function ID=“` with
- replace `” Value=“` with `;`
- replace `”/>` with
- open Excel, and drag'n'drop this file into a new spreadsheet
- highlite the column of imported data, and do `Data → Text to Columns` with separator: semi-colon
- delete column A
- insert header line and name the now-only column like the pattern, e.g. 'random' or 'sine'
- highlite the column, go to Insert tab, and insert a line diagram
- format to your liking
