## Avolites-Wiki start page

Welcome to the Avolites.de-Wiki. This site is dedicated to Avolites lighting consoles (see www.avolites.com and www.avolites.de). In particular, this is meant to be a place for custom-created content and information: there are many things not mentioned in the manuals. And as Facebook, youtube and various forums have their difficulties in making things permanently available, this wiki might be a good place.

At the moment it is planned to provide contents like

- introduction\_to\_macros information and examples to complement the Avolites Titan API
- introduction\_to\_webapi again complementning the API documentation but in reference to using it as web control surface
- writing\_personalities a slightly more comprehensive guide to writing and adjusting personalities
- Custom Shapes howto write and use your own shapes

The beauty of such a wiki is: it can be changed and extended at any time.

Have fun
