

Web API example

Playback Masters

Lists (almost) all playbacks, shows which masters they are using, and allows some filtering.

author, date	Sebastian Beutel, November2021
published	https://www.avosupport.de/downloads/icke_siegen/PB%20Masters/
prog. lang./ framework	HTML, JS, CSS; none (wrote everything with a text editor)
description	Shows which playbacks are controlled by which master. Idea from https://www.facebook.com/groups/Avolites/posts/2356283491170538/
other requirements	e.g. a web browser is required

WebAPI currently does not show all handle groups. Hence playbacks on the Titan Mobile Faderwing or unassigned handles (still in the show library) are not shown with this tool.

Screenshots

Avolites Playbacks Master Viewer

Version 0.1, 21.11.2021

Show which playbacks are controlled by which master.
Playbacks on Mobile Fader Wing are not shown.
 In modern browsers you will need to loosen CORS settings.
 You may consider plugins/extensions to do this.
[Allow CORS](#) is such a plugin which is available for many browsers.

IP:

Show: "Unsaved Show"

Filter by

Playback	Icon	Location Page.Index	User No.	titanId	Speedsource	SizeSource
Cue 1		Playbacks 1.1	1	1862	Free Run	Local
Cue 3		Playbacks 1.3	3	1886	Free Run	Local
Chase 4		Playbacks 1.4	4	1913	BPM Master 5	Size Master 4
Cue List 5		Playbacks 1.5	5	1920	BPM Master 3	Local

How it works

Test IP/Get Playbacks reads all the current playbacks, puts them into an array, and then shows this array in a table. Additionally you can filter the array by speedsource and sizesource.
