

Web API example

# Playback Masters

Lists (almost) all playbacks, shows which masters they are using, and allows some filtering.

<b>author, date</b>	Sebastian Beutel, November2021
<b>published</b>	<a href="https://www.avolites.de/downloads/icke_siegen/PB%20Masters/">https://www.avolites.de/downloads/icke_siegen/PB%20Masters/</a>
<b>prog. lang./ framework</b>	HTML, JS, CSS; none (wrote everything with a text editor)
<b>description</b>	Shows which playbacks are controlled by which master. Idea from <a href="https://www.facebook.com/groups/Avolites/posts/2356283491170538/">https://www.facebook.com/groups/Avolites/posts/2356283491170538/</a>
<b>other requirements</b>	e.g. a web browser is required

## Screenshots

## How it works

Test IP/Get Playbacks reads all the current playbacks, puts them into an array, and then shows this array in a table. Additionally you can filter the array by speedsource and sizesource.

## API Requests

- [System/SoftwareVersion](#)
- [Show/ShowName](#)
- [Handles](#)

- [playback](#)
