

Web API request

Masters/DeadBlackOut

Flashes a master to zero. Also known as Dead Black Out.

API	https://api.avolites.com/12.0/Masters.DeadBlackOut.html
namespace	Masters
usage	http://[ip]:4430/titan/script/2/Masters/DeadBlackOut?handle={handle}
example	http://localhost:4430/titan/script/2/Masters/DeadBlackOut?handle_titanId=1605 (link opens in new tab)
action	temporarily sets the grand master at 0%
parameter	Handle - the master to be flashed
returns	nothing if successful error message if request failed
remarks	Using a usernumber to identify the master will fail as masters don't have one. Either assign the master to a handle and use its location or use the reserved Titan ID, see titanId
	the blacked-out master must be reset from the Web API using Masters/ClearFlash - in order to reset it on the console do Release Release All Masters, bring the fader down to 0% to level-match, and then bring the fader up again.
	applying this to a rate or BPM master results in sending it to 0.
