

Web API request

Palette/ApplyPalette

Recall the palette on a handle - if the handle isn't a palette handle does nothing

API	https://api.avolites.com/12.0/Palette.ApplyPalette.html
namespace	Palette
usage	http://[ip]:4430/titan/script/2/Palette/ApplyPalette?handle={handle}&usePaletteTimes={bool}
example	http://localhost:4430/titan/script/2/Palette/ApplyPalette?handle_location=Colours_1_5&usePaletteTimes=true (link opens in new tab)
action	applies palette Colours page 1 no. 5 using the palette time if set
parameter	Handle: the palette to be applied usePaletteTimes (Boolean): if true, the palette's individual fade/delay times are used. if false the master palette time is used.
returns	nothing if successful error messages if the request failed
remarks	The Web API is regarded another user by Titan. Hence, fixture selection done on the console does not apply here. If there aren't fixtures selected from within the API then calling 'ApplyPalette' always works as Quick Palette
